

HORUS

MAISON FRANÇAISE DE ROBINETTERIE

EQUINOX 316

MAISON FRANÇAISE DE ROBINETTERIE

Horus a la particularité d'être à la fois une société artisanale et industrielle.

Disposant de son propre appareil de production, Horus contrôle l'ensemble de son processus de fabrication grâce notamment à son bureau d'études, de ses propres fonderies, d'un laboratoire hydraulique et acoustique interne.

Son côté artisanal repose quant à lui sur les mains expertes et expérimentées de ses employés qui depuis plus de 40 ans perpétuent le savoir-faire du luxe "haute couture" français.

Cette culture de l'excellence s'explique en partie grâce à la réalisation de robinetteries de luxe que notre société conçoit depuis sa création pour les hôtels haut de gamme et palaces du monde entier.

En restant au contact et à l'écoute de l'exigence de nos clients nous remettons sans cesse en question notre notion de perfection. Ce savoir-faire a été reconnu par l'attribution du prestigieux label Entreprise du Patrimoine Vivant (EPV), une distinction décerné par l'Etat mise en place pour distinguer des entreprises françaises aux savoir-faire artisanaux et industriels d'excellence.

The particularity of Horus is that it is both a craft business and an industrial company.

With its own production equipment, Horus controls its entire manufacturing process thanks in particular to its design office, its own foundries and an inhouse hydraulic and acoustic laboratory.

Its craftsmanship side comes from the expert and experienced hands of its employees, who have been perpetuating the know-how of French "haute couture" luxury for over 40 years.

This culture of excellence is partly due to the production of luxury bathroom fittings that our company has been designing since it was founded for highend hotels around the world.

By being close to our customers and listening to their requirements, we constantly challenge our notion of perfection. This know-how was recognized by the awarding of the prestigious Entreprise du Patrimoine Vivant (EPV) label, a recognition mark of the State set up to distinguish French companies with craftsmanship and industrial excellence.

Horus poursuit une exigence de qualité absolue grâce à une maîtrise et l'expertise de chaque étape de fabrication : conception interne, fonderie, composants traités dans la masse, un contrôle qualité à chaque étape de production.

Cette remise en question permanente absolue permet d'offrir à nos clients des produits manufacturés en France en proposant une large gamme de produits. Du style rétro au style transitionnel jusqu'aux formes les plus contemporaines, nos produits sont le résultat de l'ADN et du savoir-faire de notre maison française de robinetterie en respectant les exigences des différentes normes internationales. Qualité, fonctionnalité et design illustrent parfaitement l'univers de la robinetterie de luxe imaginée par Horus.

Horus is able to provide perfect quality thanks to its mastery and expertise of each step of manufacturing: in-house design, foundry, parts derived from a single block, quality control at all stages of production, hand assembly according to a solid know-how.

This constant search for perfect quality means we can offer our customers a wide range of collections of products made in France.

From retro to transitional and the most contemporary styles, our products are the result of our company's DNA and know-how, and meet the requirements of the various international standards. Quality, functionality and design perfectly illustrate the world of luxury bathroom fittings designed by Horus.

MANUEL RODRIGUEZ
Président Horus

INOX ASI 316

Acier inoxydable austénitique, amagnétique, très résistant à la corrosion dont la poudre de départ, atomisée au gaz, a une granulométrie maximale de 22 µm. Cet acier présente une microstructure homogène à cœur et en surface permettant d'obtenir des états de surface et des usinages de qualité. Cet acier est apte aux traitements galvaniques ainsi qu'aux dépôts chimiques et physiques. Il présente une excellente résistance à la corrosion en particulier dans un milieu humide.

Austenitic, non-magnetic, highly corrosion-resistant stainless steel with gas-atomized starting powder with a maximum particle size of 22 µm. This steel has a homogeneous microstructure at its core at the surface to obtain surface conditions and machining quality. This steel is suitable for galvanic treatments as well as chemical and physical deposits. It has an excellent resistance to corrosion, particularly in a humid environment.
